

-Press Release-

DIGITAL POWER SYSTEM NOW AVAILABLE FOR SMALL YACHTS

Nuenen, the Netherlands – At the upcoming METS in Amsterdam, Capi2 introduces the unique 'second-generation' Capi2 system. Modern technology in digital power electronics can also be cost-effective for 25-ft boats. With this system, builders can use standard marine cables and screw connectors for easy installation. It is also fully potted to withstand harsh marine environments. This second generation system makes Capi2 the first manufacturer to produce power distribution systems for smaller boats.

- **4-in-1 node** (*for small boats*)
System contains power nodes that are programmable for 3A, 6A, 10A, 13A and 16A power consumption and sensor nodes programmable as dimmers, floaters, switches, alarms and timer functions.
- **8-key interface** (*for small boats*)
Standard switches on small boats can be used. This interface is also suitable for larger boats as an additional panel in the saloon, bathroom or fly bride. The 8-key interface can also be used to build customized panels, including switches and feedback panels for navigation lights, bilge pumps and alarms.
- **220 V module**
220V loads can be controlled remotely from any Capi2 panel.
- **Touch screen** has been developed for larger yachts and makes it possible to control all 24V and 220V loads. The screen is available in sizes ranging from 5.7 to 15 inch. The touch screen has several menus and is highly flexible. The Capi2 push-button panel can be used as a backup for essential equipment.

Capi2 Nederland BV is a manufacturer of a broad range of products, including power nodes, fuse nodes (thermal and otherwise), sensor nodes, node bases, circuit breakers, panels, navigation boards, fuse boxes, cabling, cable cutters and installation software. Capi2 specializes in the development of products that meet each of our key market's unique specifications and requirements. Capi2 products always feature an ever-increasing level of technology convergence between several markets. We are also uniquely well positioned to develop solutions that combine technologies from various industry sectors.

Capi2 Nederland BV is committed to ranking among the leaders who drive the development of new industry standards and groundbreaking developments in distributed power systems. We provide unique solutions for the following markets: yachts, recreational vehicles, special vehicles, ambulances, coaches, busses, industrial, Domotica, HVACR, construction and agriculture.

Capi2 distributed power system is the only product Capi2 Nederland BV produces and supplies to end users and wholesalers, as well as special applications to wholesalers. The Capi2 system is suitable for both serial production and once-only installation.
